

Components of Nurse Substance Use Disorder Monitoring Programs

Katherine R. Lee, JD, MN, RN

Introduction: The purpose of this study was to identify the components of nurse substance use disorder monitoring programs. The study was conducted in a large, tertiary care hospital. The study included a review of the literature and interviews with nursing leaders. The study found that the most common components of nurse substance use disorder monitoring programs were: (1) a policy that prohibits the use of alcohol and drugs on the job; (2) a process for identifying and reporting suspected substance use; (3) a process for evaluating the nurse's performance; (4) a process for providing treatment and support; and (5) a process for monitoring the nurse's progress. The study also found that the most common barriers to the implementation of nurse substance use disorder monitoring programs were: (1) a lack of resources; (2) a lack of buy-in from nursing leaders; (3) a lack of training; and (4) a lack of support from the organization.

Aim: The aim of this study was to identify the components of nurse substance use disorder monitoring programs.

Methods: The study was conducted in a large, tertiary care hospital. The study included a review of the literature and interviews with nursing leaders.

Results: The study found that the most common components of nurse substance use disorder monitoring programs were: (1) a policy that prohibits the use of alcohol and drugs on the job; (2) a process for identifying and reporting suspected substance use; (3) a process for evaluating the nurse's performance; (4) a process for providing treatment and support; and (5) a process for monitoring the nurse's progress. The study also found that the most common barriers to the implementation of nurse substance use disorder monitoring programs were: (1) a lack of resources; (2) a lack of buy-in from nursing leaders; (3) a lack of training; and (4) a lack of support from the organization.
